SGM Industries, LLC is pleased to introduce the **TB 200** commercial turf brush that is a step above any brush on the market to date. The **TB 200** has been professionally designed and engineered for the ultimate in strength, quality, durability and ease of

operation.

The TB 200 has a 2 year limited warranty

TBH 200, a hydraulic version, now available

Click on the lower right corner to zoom image.

The TB 200 can:

- Work well with all grass types - Bent, Poa Annua, Bermuda, Paspalum, Fescue - even synthetic turf
- Perform equally well at any cutting height on greens, tees or fairways, and any vintage of turf stand, whether a 50 year old variety or one of the most recent releases
- Brush up the longer, coarse blades so they can be mowed off - continual grooming creates a fine texture to the putting surface and allows the ball to roll on the vertical, cut ends of the turf, resulting in a smoother faster ball roll

- Open the canopy for better light and air exposure for possible disease suppression
- Eliminate bruising and stress that results from a vertical mowing; no physical injury to the plant, even when making multiple passes with the brush
- Completely fill aeration holes with turf sand in 2 or 3 passes
- Place sand under canopy so much less is picked up by cutting units thus less resurfacing time on reels and bedknives
- Sweep coarse sand, rock chips and pebbles off the green before mowing
- Significantly reduce labor costs - 10 minutes per green with only one employee

*Gently lifting the grain after just one pass with the *TB200*.
